LUNA

Make the most of your Insight + LUNA installation and let us be your host!

Supporting technology and the people who use it can be fun, dynamic, and of course stressful. But in today's challenging economic landscape the fun seems to have lessened while the stress has increased. Between a dwindling staff, competing departments, and budget balancing there's not a lot of time left to think of hardware platforms, version compatibility and when to schedule the next software upgrade.

We want to make supporting Insight + LUNA easy for you. We want to host your collections so you can concentrate on building them. Not only do our hosting services make life easier for you, but your institution will also benefit from always having the most recent version of Insight. The users you support will love you for it.

What does it mean to get the most out of your Insight + LUNA investment?

- Are you delivering all of your local Insight collections through the LUNA browser? Have you combined local collections with the LUNA Commons?
- Are your users benefiting by LUNA's many search options? Have you exposed public LUNA collections to OAI-PMH for integration with Discovery tools?
- Have you gone beyond just image collections and enabled full text search with BookReader and PDF media?

If you haven't yet achieved the above, you're not making the most of your Insight + LUNA investment. But we are determined to help you get there. We've been hosting client collections for over a decade and our newest model bundles support with hosting.

With our web-scale hosting we don't count images, instead we offer rates that encourage rather than dissuade collection growth.

As we continue to develop the Insight + LUNA software, we have our sight set on simplifying the collection building process, and adding media management workflow. We're making Insight + LUNA bigger, better, faster and above all easier to use. With our Hosting Services Insight can also be easier to support.

Let us know if you're interested in a quote that will combine your annual support with a migration to our servers, an upgrade to the most recent version of our software, and hosting. Migrating to our servers is a simple process that reaps great rewards.
